

**IN THE ABSTRACT:**

Replace the abstract originally provided on the cover sheet of the PCT application with the new abstract as follows: A new abstract numbered page 29 is enclosed for the last page of the application following the claims.

**ABSTRACT OF THE DISCLOSURE**

A method for assessing the characteristics obtainable in a network for mobile telecommunications apparatuses suitable for managing calls with both data traffic and/or voice and data traffic. On the basis of the performance requested for the quantity and characteristics of the traffic required, the method provides a simple manner for determining both the effective performance of the network in terms of the probability of occupation of the radio channels and the probability of dropped calls during the peak traffic period and optimal dimensioning of the network.
